I have 23 years experience working with people of all ages, and have worked in both metropolitan and rural hospitals, community based clinics and schools, within WA, the NT and the UK. I have developed skills across a range of communication disorders, including developmental, disability and acquired, and I am an Autism Spectrum Disorder diagnostician. A commitment to regular professional development ensures I am delivering the best services possible and maintains my Certified Practising Speech Pathologist status. I am passionate about providing family centred, collaborative, evidenced based services for all of my clients.
